

## Assessment of Power BI applicability by conducting a mini proof of concept

*\*3-day workshop on-site at client's premises*

### Day 1:

- **for client's technical team and business leaders**

- Introduction to Microsoft Power BI analytics tools;
- Demo of sample industry Power BI solutions built on Microsoft Dynamics products;
- Review of company sources of data and analytics requirements;

### Day 2:

- **for client's technical team**

- Dashboard in a day – a session for co-building a useful and compelling BI dashboard with a sample of company's data;
- Make the step to predictive analytics by exploring hidden patterns and correlations, what-if scenarios;

### Day 3:

- **for client's technical team and business leaders**

- Evaluation of the results achieved the previous days;
- Assessment of applicability of the solution

### About FTS Data Sense:

*We at FTS recognize data as the lifeblood of an organization. Data is the current driver of productivity and successful are those companies that can extract value from data instead of burying them in different data storages.*

*Our 23+ years successful experience in providing business information services has given us the confidence that we can help our customers to digitally transform their business by:*

- *Analyzing the different sources of data and outlining a clear vision of what the information there is worth of;*
- *Building a compelling BI solution using the Microsoft BI tools that replaces the passive approach of reviewing historical data with a modern, engaged analytical model.*
